

A COCHILCO SEMINAR

Chilean Mining: Past, Present and Future

29 September 2010, Antofagasta Enjoy Hotel

Introduction

As part of events marking the Bicentennial, Cochilco is highlighting the key role played by the mining industry in furthering social and economic growth in Chile. As such, Cochilco is hosting a seminar featuring a select group of Chilean and international experts who will discuss the evolution of Chilean mining and its key milestones, contributions, and challenges.

Participants will be taking a comprehensive look at the growth and expansion of Chilean mining and review its current status, notably how it faces up to key corporate citizenship challenges. Accomplishments and shortcomings in materializing the Mining Cluster, perhaps its most emblematic project, will also be examined.

Learning more about the future plans of key users of Chilean minerals is crucial to determining sector sustainability going forward. As such, seminar participants will review recent trends in the automaking, construction, non-conventional renewable energy and electronics industries, to name a few.

AGENDA

9-9:20	Opening remarks
9:20-9:50	Overview of mining sector growth and development in Chile
